Summary

Full-Stack Software Engineer with 1 year of experience building enterprise applications on microservices and microfrontend architecture. Skilled in REST API design, React-based interfaces, and event-driven systems, with full lifecycle ownership across development, testing, deployment, and operations. Hands-on experience in DevOps tooling, Agile workflows, and scalable system design.

Experience

OpenText Bangalore, India
Associate Software Engineer *March 2025 – Present*

- Contributed to ArcSight SIEM — a large-scale enterprise security platform on microservices and microfrontend architecture — owning features end-to-end across frontend and backend modules.
- Worked on Spring Boot backend services delivering REST API enhancements and business logic; built reusable React/Redux components improving UI consistency and performance across modules.
- Worked with Kafka-based event-driven architecture to enable reliable ingestion, routing, and processing of high-volume security data streams.
- Deployed and operated containerized services using Docker, Kubernetes, and Helm, ensuring stable CI/CD releases and high availability across environments.
- Debugged production issues via log analysis, identified root causes, and collaborated in Agile sprints — enforcing best practices through code reviews and reducing defects in production.

Technical Skills

Languages: Java, JavaScript, Python
Backend: Spring Boot, Kafka, Node.js, Express.js
Frontend: React, Redux, Tailwind CSS
Databases: MongoDB, MySQL
Architecture: Microservices, Microfrontend, REST APIs, Event-Driven Architecture
DevOps & Tools: Docker, Kubernetes, Helm, Jenkins, CI/CD, Git, GitHub, Linux, Jira, Postman

Projects

Banking Microservices Platform | *Spring Boot, MySQL, OpenFeign, Eureka, RabbitMQ, Spring Cloud Gateway, Docker*

- Built a distributed banking platform with independent Spring Boot microservices and MySQL databases, designed for scalability, service isolation, and high availability.
- Developed and tested secure credit, debit, and fund transfer APIs; enabled synchronous inter-service calls via OpenFeign/Eureka and async notifications via RabbitMQ.
- Integrated Spring Cloud Gateway for centralized routing; containerized all services with Docker Compose for consistent development and deployment environments.

Real-Time Web Summarizer | *React, Node.js, Express.js, MongoDB, FastAPI*

- Built a full-stack app to extract web content and generate AI-based summaries in real time using modular FastAPI and Node.js backend services.
- Implemented secure JWT-based authentication and integrated summarization services with a React frontend for a seamless real-time experience.

Achievements

Solved 500+ DSA problems on LeetCode with a contest rating of 1700+.

Education

CVR College of Engineering Hyderabad, India
B.Tech in Computer Science and Engineering CGPA: 9.22 *2021 – 2025*
